

Eastgate Freeway Station

The Eastgate access ramps connect the existing 142nd Place SE bridge to the I-90 HOV (High Occupancy Vehicle) lanes. The new ramps provide a more direct connection to the Eastgate Park-and-Ride for buses, carpools and vanpools traveling the I-90 corridor. Transit and HOVs save travel time by avoiding congested intersections and crossing three lanes of traffic to exit I-90 from the HOV lanes to access the park-and-ride.

Mode

Bus

Highlights

Construction completed: October 2006

Location: I-90 at 142nd Avenue SE

Budget: \$38.9 million

Planning partners: Sound Transit, WA State Department of Transportation, King County Metro, City of Bellevue

Consultants & contractors

Preliminary engineering/environmental documentation: HNTB and WSDOT

Final design and construction management: WSDOT and INCA Engineers

Construction: Mowat Construction

Public art: Alex Young

Public art

Public art by Alex Young features bronze salmon attached to the ramps near the flyer stop.
